

ANTIQUING RELEASE ANTIQUING RELEASE ANTIQUING AGENT

Colors shown on this chart approximate the color of the release powder. When the release powder is applied to colored concrete and stamped, the two colors will combine and create variations of color. The amount of release color retained after washing will also vary depending on the condition of the concrete when it was stamped.

Concrete color is altered by many factors, including cement and aggregate color, slump, finishing practices, and curing method. Using the contemplated materials and construction techniques, representative samples should be cast for approval, especially when exact color matching is important.

Please indicate when ordering:

- SikaColor®-300 Antiquing Release: R#
- SikaColor®-340 SG Antiquing Release: SGR#
- SikaColor®-350 Antiquing Agent: PT#

ANTIQUING RELEASE ANTIQUING RELEASE ANTIQUING AGENT

SikaColor®-300 Antiquing Release and SikaColor®-340 SG Antiquing Release are colored powder bond breakers used with stamping mats, texturing skins and texture rollers. The products provide accent colors that complement or contrast with the underlying concrete surface. Additionally, they enhance the transfer of the detailed pattern and texture, and prolong the surface life of the stamping mat or texturing tool. They are compatible with integrally colored concrete, color hardened concrete and stampable cementitious overlays. SikaColor®-300 Antiquing Release and SikaColor®-340 SG Antiquing Release are finely ground, streak free powders that are a blend of UV-resistant pigments and water repelling additives. Broadcast SikaColor®-300 Antiquing Release or SikaColor®-340 SG Antiquing Release over the concrete surface prior to placing the stamping or texturing tools. As the imprinting tool is pressed into the plastic concrete surface, a portion of the antiquing release is embedded into the textured surface of the concrete. When the tool is removed, it breaks cleanly, without marring the colored concrete surface. Upon washing and sealing, the difference in color between the base concrete and the release creates a visually attractive antiqued look on the concrete. The added color visually enhances the depth of the texture. The amount of release agent retained on the concrete will vary. Use a SikaColor®-300 Antiquing Release or SikaColor®-340 SG Antiquing Release color that matches or contrasts with the concrete color. Add a combination of colors to create interesting shading and highlights on the finished concrete surface.

SikaColor®-350 Antiquing Agent is used to antique unsealed hardened textured concrete and unsealed overlaid textured surfaces. SikaColor®-350 Antiquing Agent mixes with water and is applied to the concrete surface to add a natural antiquing color to newly textured concrete, overlays or old weathered textured surfaces.
